02.02 Operating procedures

Operating procedures

Regular maintenance and repairs on vehicles with Hy-Kers hybrid technology may only be performed by centres with at least one TÜV-certified F-HVT technician (Ferrari-High Voltage Technician) and with all the specific equipment required.

All other centres with no F-HVT technician may only perform regular maintenance procedures.

Booking in and redelivery of vehicles with Hy-Kers hybrid technology may only be performed by F-HVT technicians.

Regular maintenance and repair procedures on vehicles with Hy-Kers hybrid technology may only be delegated to other personnel by an F-HVT technician.

Any person tasked with performing regular maintenance and repair procedures on vehicles with Hy-Kers hybrid technology must be in possession of valid accrediting certification.

The operator must observe the instructions and warnings given in the manual precisely and must not implement inappropriate methods or tools, as this may constitute a risk to personal safety and compromise the reliability of the vehicle.

In addition to the guided diagnostic procedure implementable with the FERRARI SD-3 or DEIS tester, each section of the manual contains diagnostic procedures to identify malfunctions of the different components in the vehicle.

Evaluating the impressions of the user is of vital importance, formulating appropriate questions to clearly identify the symptoms of the problem.

Once the cause has been identified, plan the job by consulting the relative informative notes concerning the tools necessary, the reference data for servicing and disassembly and reassembly procedures given in the manual.

Following the methods described in this manual precisely for each job ensures the safety of the user and the quality of the vehicle.
