### 03.03 Dangerous emissions

| Exhaust gas                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Danger                                                                                                                                                                                                                                                                               | Precautions                                                                                                                                                                                                   |
| The engine must be kept running for certain maintenance procedures. Exhaust gases contain carbon monoxide, a highly toxic gas which may even cause death in the event of prolonged inhalation.                                                                                       | Never run the engine in a closed space; preferably work outdoors or use exhaust extraction systems.                                                                                                           |
| The emissions control devices installed were necessary in order for the vehicle to obtain type approval allowing the vehicle to be driven legally on public roads in compliance with emissions and noise legislation. Removing or tampering with these devices is prohibited by law. | Never puncture the exhaust silencers or remove any of their internal elements. Never use the vehicle with any of these devices removed.                                                                       |
| Each of these devices bears a marking or label indicating the type approval number obtained.                                                                                                                                                                                         | Never replace any of the original devices with devices without type approval. These devices must also be kept in proper working order, carrying out all the procedures indicated in the maintenance schedule. |

| Battery                                                                                                                           |                                                                                        |
|-----------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|
| Danger                                                                                                                            | Precautions                                                                            |
| As the battery is charged, gases are released which are potentially explosive in the event of contact with sparks or naked flame. | Always charge the battery in a well ventilated area.                                   |
| The battery also contains sulphuric acid as an electrolyte, which may cause irritation in the event of skin contact.              | Always wear appropriate protective garments and a face mask when handling electrolyte. |
