A3.23 Checking suspension components

Checking suspension components

➤ Remove the complete wheels ( D2.01).

- Road test the vehicle to check shock absorber performance and to check for suspension noise.
- Check tightness of suspension components.
- Check that all protective gaiters are in good order and that the ball joints on the stub axle and on the rear hub holder have sufficient play.
- Check that the silentblock bushings at the arm and shock absorber mounting points on the chassis have sufficient play.
- Check that the arms are not deformed and exhibit no signs of failure.
- Check the state of the upper rebound stop bushes on the shock absorbers.
- Check front and rear stabiliser bar alignment and the state of the rubber mounts and tie rod ball joints.

➤ Refit the complete wheels ( D2.01).
