A3.33 Treating leather upholstery - Alcantara

Treating interior leather upholstery

- Proper and regular treatment (at least once a year) will preserve the natural qualities and softness of Ferrari leather trim.
- For this precise purpose, a range of specific leather care products (Cleaner and Cream), developed and tested by Ferrari, is also available. These products may be ordered through the Ferrari Spare Parts Department, either individually or as part of the "Care Kit", which includes a complete set of car cleaning products.
- For the instructions on how to use the products contained in the "Care Kit", see the "User's Manual, Carrozzeria Scaglietti Programme" and the instructions included with the Kit.
- Never use acidic detergents, turpentine, liquid stain removers, petrol, solvents or domestic cleaning products to clean leather as these will damage the natural material.

Cleaning and application of moisturising conditioner to protect and preserve the leather interior trim of vehicle

Light cleaning of leather internal trim of vehicle

- This procedure must be performed whenever it is necessary to clean and restore the sheen and softness of the leather trim of the vehicle.

- Products required:
- **A)** Water and neutral vegetable soap based cleaner.
- **B)** Specific cleaning cloth.

- Apply the cleaner product **(A)** to the specific cloth **(B)**.

- Apply the cleaner on and around the area to be cleaned.
- Rub the relative area with circular movements.

Removing excess anti-squeak leather conditioner

- This procedure must be performed whenever it is necessary to remove excess anti-squeak leather conditioner from the leather trim of the vehicle.

- A water and neutral vegetable soap based cleaner product or a piece of natural rubber may be used to remove excess anti-squeak leather conditioner.

Moisturising conditioner to protect and preserve the leather interior trim of vehicle

- This procedure must be performed whenever it is necessary to apply moisturising conditioner to protect and preserve the leather interior trim of vehicle.

- This kit consists of the following:
- **C)** Cleaner product.
- **D)** Moisturising cream conditioner.
- **F)** Specific sponge.
- **G)** Specific cloth.

- Apply the cleaner product (**C**) as shown in the image aside.

- Rub the relative area with circular movements using a specific sponge (F).

- Apply the moisturising cream conditioner (D) to the specific cloth (G).

- Rub the relative area with circular movements.

Removing ball point pen stains

- This procedure must be performed whenever it is necessary to remove ball point pen stains from the leather trim of the vehicle.

- The following products are required:
- **C)** Cleaner product.
- **D)** Moisturising cream conditioner.
- **E)** Stick for removing ball point pen stains.
- **F)** Specific sponge.
- **G)** Specific cloth.

- Apply the cleaner product (**C**) and rub with the specific sponge (**F**) .

- Apply remover product to the ball point pen stain with the stick (**E**).

- Dab with the specific cloth **(G)** to allow the product to penetrate into the pored.

- Apply the cleaner product **(C)** again and rub with the specific sponge **(F)**.

- Apply the moisturising conditioner cream **(D)** to the treated area with the specific cloth **(G)**.

Treating interior trim in Alcantara

Alcantara® is the registered trade mark of a new generation material produced exclusively by Alcantara S.p.A.

Both elegant and practical, Alcantara® combines softness, sophistication, rich colours and outstanding resilience with remarkably easy maintenance.

The material is ideally suited to innovative and exclusive applications in interior decor, automotive interiors, fashion clothing and fashion accessories.

Regular care

Avoid rubbing with too much force and do not use equipment with vapour.

- Regular cleaning is recommended to maintain the beauty of Alcantara® over time.

Daily cleaning

- Simply dust Alcantara® with a soft brush or dry cloth, or clean with a vacuum cleaner.

Weekly cleaning

Avoid the use of rags/blotting paper because they could leave ink on the material.

- After dusting Alcantara®, wipe with a slightly moistened white cotton cloth.

Yearly cleaning

- With removable upholstery, machine wash using the following procedure (general guidelines for washing).
- With non-removable upholstery, use specific products for cleaning Alcantara®.
- If no specific products are available, dust the material thoroughly.

Be very careful not to wet Alcantara® in depth.

- Moisten a soft cloth or sponge with water, squeeze out thoroughly and wipe all surfaces in Alcantara®.
- Wipe again with a cloth moistened with clean water and leave to dry completely (overnight).
- Once dry, brush delicately with a soft bristled brush to restore the nap.

General guidelines for washing

- If removable upholstery needs to be cleaned completely due to large stains, observe the washing instructions given aside precisely:

In case of dry-cleaning do not use trichloroethylene and avoid direct contact with equipment that uses steam.

Alcantara® must not be treated with chlorine-based bleaches.

Never use a centrifuge.

- With removable upholstery, Alcantara® may be safely machine washed at approximately 30°C, using a neutral detergent.
- If Velcro is applied to the upholstery hems, protect the Velcro with counter-velcro before washing to prevent damage to the upholstery.
- After washing, allow the upholstery to air-dry and brush gently with a soft-bristled brush.

The bottom of the iron must be at a temperature lower than 110°C.

- If necessary, Alcantara® may be ironed, placing a white cloth between the iron and the material.
- Spray extraction cleaning machines may only be used at low temperatures.
- For non-removable upholstery, follow the procedure give for yearly cleaning.

General guidelines for stain removal

- With localised stains, if no specific products for cleaning Alcantara® are available, immediately wipe off (**within 30 minutes**) and minimise the stain, working from the edge of the stain toward the middle to stop it from spreading.
- Before wiping off the stain, remove the spilt substance from the upholstery: use a spoon or plastic spatula for dense substances (yoghurt, jam etc.), use unprinted absorbent paper or a sponge with liquids.

Do not pour the product being used for cleaning directly on Alcantara®.

Avoid rubbing to keep the stain from spreading or penetrating in depth.

- Use a moistened and thoroughly squeezed white cloth or sponge to remove stains.
- When using a sponge, rinse in clean water and squeeze thoroughly between applications.

Water-soluble stains

- Preferably use specific products for cleaning Alcantara®.
- If no specific products are available, use water, lemon juice or pure ethyl alcohol (spirits), depending on the case.
- Fruit juice, jam, jelly, ketchup: use lukewarm water; rinse by patting with clean water.
- Blood, egg: use cold water; do not use hot water as it coagulates proteins; rinse by patting with clean water.
- Liqueur, wine, beer, cola and tea: use lukewarm water; if a coloured stain remains, use lemon juice then rinse well.
- Copying pencil, cocoa, chocolate, custard or chocolate confectionary, ice cream, mustard: use lukewarm water; rinse by patting with clean water.
- Vinegar, hair gel, tomato sauce, sweet coffee: use lemon juice, then wipe with lukewarm water; rinse by patting with clean water.

Non-water-soluble stains

- Preferably use specific products for cleaning Alcantara®.
- If no specific products are available, use water, lemon juice or pure ethyl alcohol (spirits), depending on the case.
- Lipstick, foundation, mascara, eye shadow, perfume, shoe polish, oil and grease in general, grass stains and marker pen (including indelible markers): pat with ethyl alcohol then pat with water and rinse.
-  With difficult to remove grass and marker pen stains, especially if light in colour, clean as soon as possible before the stain dries excessively.
- Chewing gum and wax: fill a plastic bag with ice; when the substance has hardened, break it off in pieces, then treat with ethyl alcohol.

Stubborn stains

- Repeat the treatments described several times.
-  Often, even non-water-soluble stains require treatment with water after initial cleaning.
